McFarland Cascade's DrySnap™ dries up wet spaces
New below deck drain system turns unusable spaces into living, storage areas

Tacoma, Wash.—Why give up valuable real estate to cobwebs and spiders? McFarland Cascade now offers DrySnap™, which allows homeowners to turn previously unusable areas under existing deck spaces into covered outdoor living rooms or outdoor storage spaces.

A new below-deck flush-mount ceiling drain system, DrySnap is made of vinyl ceiling panels that collect and direct run off way from the space below decks. Now, a difficult-to-clean and unsightly deck underside can become a fresh, bright ceiling. Homeowners can use the dry area for a screened porch, a space for a hot tub, or storage for lawn or sports equipment.

Designed with easy, snap together features, the five-component system reduces installation labor and time. The joist brackets attach to the bottom of the joist, eliminating inherent problems with inconsistent joist spacing. The unique system makes it unnecessary to trim panels to fit with the joists.

Virtually maintenance-free, DrySnap offers protection for all kinds of weather to create beautiful outdoor living spaces that remain dry.

A deck builder can use DrySnap with any of these McFarland Cascade decking products:

- **Stonedeck™**—Featured in Sunset Magazine in August of 2005 and 2006, these light-weight natural stone tiles backed with a high-strength composite will install on standard above ground deck frames with no additional substructure required. Stonedek can be used for an entire project or as an accent.
- **Extreme Tropical Hardwoods**—When nothing but real wood will do, McFarland Cascade's Extreme Tropical Hardwood line offer richness and durability that choosy customers appreciate. Their dramatic grains and distinctive colors can add value and elegance to any home, while their natural resistance to fungi and termites offer maintenance benefits.
- **Xtendex®**—A rice-hull-based composite that naturally resists insects and mold, Xtendex features the Quick Clip no-visible-screw building system. This wood-free choice is more stain and scratch resistant than most other composite options and installs in up to half the time. It combines principals of conservation with practical engineering and ease of use.

- **RhinoDeck®**—Recognized as a quality wood alternative in the building industry, this composite decking system is comprised of 50 percent recycled high-density polyethylene (HDPE) and 50 percent recycled wood fibers. People who have used RhinoDeck have helped America recycle more than 1 billion plastic containers a year. It's splinter free, requires no painting or staining and installs like traditional wood.
- **Royal Trim Board®**—Ideal for new construction and remodeling, Royal Trim Board is made of 100 percent Cellular Vinyl PVC™ to stand up to severe weather and harsh seasonal conditions. It also offers design versatility with unmatched Poly Select® surface durability.
