Contractors can get certified with McFarland Cascade at the JLC show

TACOMA, Wash.—At the Journal of Light Construction show Nov. 9-10, contractors can learn more about McFarland Cascade's premier deck systems—and get their McFarland Cascade Contractor Certification, which can lead to greater sales.

Once certified, you can access lead-generating co-op advertising opportunities, our website's local contractor locator, sales and marketing support and free CadQuest deck design software.

McFarland Cascade's complete line of decking and rail solutions includes:

- **Xtendex®**—A rice hull-based composite that naturally resists insect damage and mold featuring a building system with no visible screws.
- **Stonedeck®**—A simple joist plate and classic, natural stone tiles backed with a high-strength composite gives homeowners an alternative to wood-look deck.
- **Extreme Tropical Hardwood®**—When natural resistance to moisture and bug damage is essential, this product gives homeowners a durable choice.

To get certified, stop by booth (number). For more information on McFarland Cascade's products, call (800) 426-8430 or visit www.mcfarlandcascade.com.
